Safety Data Sheets now available online

Safety data sheets are delivered with the Siegwerk product and, among others, inform about measures to protect humans and the environment. They are provided for both hazardous and non-hazardous products.

The screenshot shows a web interface for downloading MSDS. On the left, there is a vertical strip of images showing various colored pigments in small containers. To the right of these images is a red banner with the text "INK, HEART & SOUL" in white. Below the banner, the text "MSDS-DOWNLOAD" is displayed in red. Underneath, there is a search form with a "Suche starten" button, an "Eingaben löschen" button, and a "Hilfe" button. To the right of these buttons is a "Produkt:" label and a "Materialnummer" input field. At the bottom left, there is a "Sprachauswahl" section with flags for the UK and Germany.

Siegwerk is now offering its European customers the opportunity to access these safety data sheets directly online in the [Product Safety](#) area. After entering the material number the respective safety data sheet can be displayed or printed as PDF.

The new feature is an additional service for Siegwerk customers and is completely irrespective of the statutory dispatch of safety data sheets per mail, fax or letter.
