Azo dyes which, by reductive cleavage of one or more azo groups, may release certain carcinogenic primary aromatic amines

In the manufacture of **all** products supplied by Siegwirk, azo dyes¹ which, by reductive cleavage of one or more azo groups, may release the carcinogenic primary aromatic amines listed in the REACH Regulation (EC) No 1907/2006, Title VIII/Annex XVII (formerly regulated by the Directive 76/769/EEC, relating to restrictions on marketing and use of certain dangerous substances and preparations) and its amendments, or raw materials containing such azo dyes, are not used as intentionally added ingredients:

The presence, however, of traces of these substances in the product coming from raw material impurities, from the process or as adventitious contaminant cannot be excluded².

² However, we proactively monitor and/or retrieve supplier data on impurities of carcinogenic primary aromatic amines in all raw materials, likely to contain such traces, namely azo pigments. We can assure you that potential traces in our products, if any, are, as a rule, well below 0,05%.
